## FUD FIRST

Fear, uncertainty, and doubt (FUD) – let's get it out of the way and be real.

This project, and others like it, are high risk. We're not talking about your grandma's penny stocks, we're talking higher risk than forex. Sometimes it's like rolling the dice and hoping you don't roll snake eyes. We mean no offence to sincere project owners but in many cases you, the investor, won't know the people behind the project so we feel a strong warning, a FUD warning, is warranted.

If you're still reading, then you're probably the kind of person who knows how to make informed decisions and takes responsibility for your actions. You don't cry for help when things go south, you only use what you can afford to lose, and you're here for the fun of it all.

Let's face it, investing is like gambling, but with a lot more research involved. So, treat this as a game, a fun place to play, and one of the safest places to play with your crypto. But never forget, it's all higher-than-high risk. Don't bet the farm, don't sell your house or car, and don't play with more than you can afford to lose.

By now, we hope you understand that this project, and those we launch here, are for your entertainment, enjoyment, and sometimes pain. Some projects will go through our vetting process, including a LayerOne audit and thorough KYC. That means, if they rug, you can take legal action and use the information we have on record to go after them. But, let's be clear, the LayerOne badge or certificate does not guarantee a project is perfectly safe, nor does it guarantee it will succeed. Nothing we say or do here constitutes investment advice.

Does the LayerOne badge or certificate guarantee a project is perfectly safe, that it will not rug? No. But it does reduce the risk.

Does the LayerOne badge or certificate mean a project will not fail, that it will be the smashing success I hope for because I stupidly bet my life savings on it? No. Don't be stupid.

So, be smart, be wise, and #ClickSafe out there, everyone!

DO NOT PROCEED UNLESS  
YOU UNDERSTAND AND ACCEPT  
THE RISKS INVOLVED

Now let's talk about what we want to achieve here...

## INTRODUCTION

Aiming to create a safer place for crypto while creating generational wealth opportunities, AscensionOne is a decentralized launchpad with a unique tiered system and #SafeClick vetting process.

#SafeClick – let's talk safety first. While nothing is guaranteed, we will be launching projects that pass the LayerOne #SafeClick audit & KYC. These launch on our tiered system for free. These will be clearly marked for market participants who want to lower their risk.

We understand the importance of launchpads in protecting investors and ensuring the success of projects, which is why our tiered-launch projects will undergo thorough vetting by our team. The LayerOne #SafeClick audit and KYC requirements will be mandatory for founders to launch through our Tiered platform, and our team will provide consultation throughout the process.

**Tiered System** – designed to create a fair investment level for all market participants, we use a tiered system whereby participants purchase our native token to guarantee their spot and allocation in seed rounds, private sales and pre-sales. Our approach also eliminates the unpredictable launch prices and results commonly found in “fair launches”. While the number of ASPv2 tokens to purchase per Tier will change over time due to the price of the ASPv2 token, the Tiers are \$ based (USDT/BUSD or other stable coin). Here's an example of how our Tiered system will work:

**Tier 1:** \$10,000 USDT/BUSD worth of ASPv2 Tokens. When you stake \$10,000 worth of ASPv2 tokens to “register” in a launch, this guarantees your allocation of the launch tokens such that you can purchase up to 25x the value of your staked ASPv2 tokens.

E.g. if a launch is listed, and you registered by staking at Tier 1, then you are guaranteed to be allowed to buy up to 25x \$10,000 (\$250,000) of the launch tokens at a price per token as stipulated by the project owner. There is also a minimum buy rule that applies to each Tier.

## TIERS

At the launch of AscensionOne the following Tiers will be in place and may change over time.

TIERS	\$ amount of ASPv2 required per TIER	Multiplier determines MAX investment	MAX investment (TIER ALLOCATION)	MIN investment
Tier 11 (0.5x)	\$ 50.00	0.5	\$ 25.00	\$ 0.00
Tier 10 (1x)	\$ 100.00	0.75	\$ 75.00	\$ 25.00
Tier 9 (2x)	\$ 200.00	1	\$ 200.00	\$ 75.00
Tier 8 (5x)	\$ 500.00	2	\$ 1,000.00	\$ 200.00
Tier 7 (10x)	\$ 1,000.00	3	\$ 3,000.00	\$ 1,000.00
Tier 6 (15x)	\$ 1,500.00	4	\$ 6,000.00	\$ 3,000.00
Tier 5 (20x)	\$ 2,000.00	5	\$ 10,000.00	\$ 6,000.00
Tier 4 (25x)	\$ 2,500.00	10	\$ 25,000.00	\$ 10,000.00
Tier 3 (30x)	\$ 3,000.00	15	\$ 45,000.00	\$ 25,000.00
Tier 2 (35x)	\$ 5,000.00	20	\$ 100,000.00	\$ 45,000.00
Tier 1 (50x)	\$ 10,000.00	25	\$ 250,000.00	\$ 100,000.00

## TIERED LAUNCH RULES

### 1. PURCHASE:

- a. Purchase ASPv2 tokens at the tier you want.

### 2. REGISTER:

- a. “Register” for the launch you want. This is a “staking” process. Stake the amount of ASPv2 tokens at the Tier you want.

### 3. BUY THE LAUNCH:

- a. When the seed round, private or pre-sale begins, buy the minimum – maximum amount (in USDT/BUSD) of launch tokens for your Tier. You are guaranteed to be allowed to buy an amount within your tier and within the time period scheduled for the sale. – See MINIMUM-MAXIMUM TIER RULES

### 4. FORFEITURE RULE WARNING:

Remain staked to the end of ALL vesting periods in order to claim all the tokens you purchased in the launch.

**UNSTAKING = FORFEIT ALL FUTURE VESTINGS**

Here’s an example:

Assume a launch has 4 vesting periods of 1 month each and at the end of each period you can claim 25% of the tokens you purchased.

Perhaps after the first vesting period, the token has gone up 10x and you claim the 25% vested to you and sell some, getting all your money back plus a little profit.

You might be satisfied with that so you decide to un-stake (de-register) your ASPv2 tokens and move on to another launch.

In this case, you will lose the tokens you purchased but only those that have NOT YET VESTED (tokens not yet claimable).

You still have the tokens you claimed from the first vesting period but forfeit your remaining tokens.

**WARNING:** There is no mechanism to compensate you or reverse this even if you “accidentally” un-stake.

**THIS IS WHERE SOME LOYALTY BONUSES KICK IN FOR THOSE REMAINING STAKED IN A LAUNCH – See LOYALTY BONUSES**

#### 5. LOYALTY BONUSES:

- a. If the FORFEITURE RULE kicks in because someone forfeited their remaining vested tokens:
  - i. 20% of the forfeited tokens will be burned to support the launched token value and,
  - ii. 80% will be distributed among all those who remain staked in the launch.

This can be a substantial bonus depending on your Tier.

It pays to stay staked in your chosen launch.

#### 6. 50% TAX DIVIDENDS:

- a. ASPv2 tokens staked in a launch earn dividends at 50% of the rate of those staked in the normal AscensionOne staking contract.

ASPv2 tokens must remained staked in the launch for a full calendar month in order to receive 50% of the normal tax

dividends. Un-staking (de-registering) from a launch within a calendar month for any length of time, for any reason, forfeits your dividends for that month.

### DOUBLE WARNING: THIS FORFEITS YOUR UN-CLAIMED INVESTMENT – ALL FUTURE VESTINGS

Even if you accidentally un-staked this forfeits your tax dividend earnings for that month. The loss of dividends on the ASPv2 tokens applies only to the ASPv2 tokens you staked for that particular launch. Any tokens you have staked in the main ASPv2 pool (contract) will still earn dividends at the normal rate.

## 7. MINIMUM-MAXIMUM TIER RULES

- a. Once you've registered for a launch, the MINIMUM-MAXIMUM TIER RULE applies WHEN YOU ATTEMPT TO BUY the launch token.

The rule is:

YOU CANNOT BUY INTO A LAUNCH AT A LOWER OR HIGHER TIER THAN YOU ARE REGISTERED AT

Here's an example of how this works:

INVESTOR 1: Tier 1 is \$10,000 of ASPv2 – 25x buy-in max = \$250,000 MAX buy of a launch token

INVESTOR 2: Tier 2 is \$5,000 of ASPv2 – 20x = \$100,000 MAX buy of a launch token

INVESTOR 1 (at Tier 1) cannot cannot buy MORE-THAN (MAX) \$250,000 or LESS-THAN (MIN) \$100,000 worth of the launch token. This MIN level is the MAX level of the previous Tier.

INVESTOR 2 (at Tier 2) cannot buy MORE-THAN (MAX) \$100,000 or buy LESS-THAN (MIN) \$45,000 worth of the launch token. This MIN level is the MAX level of the previous Tier.

Fair launches – We will also cater to the “degen” market where the even higher risk game-of-launches is played. We will have a fair launch mechanism, fully automated so literally anyone can do their own launch. Unlike the tiered side of the launchpad which is \*free, these launches will not receive our #SafeClick audit or KYC badges and there will be a fee for launching that is within the range of current launchpad pricing.

(\*free for project owners with your LayerOne #SafeClick audit + KYC)

Services – We offer a full range of services including:

- full stack development for your project,
- design and branding,
- hosting,
- smart contract development,
- audit and KYC,
- marketing consulting,
- listing on CMC, CG, Coinology and others.

## MARKET ANALYSIS

DeFi is rapidly growing, with billions of dollars locked in various DeFi protocols.

Existing DeFi launchpads have seen explosive growth but also experienced issues such as high gas fees, lack of transparency, and scams.

AscensionOne aims to address these issues by providing a safer, more transparent launchpad with a unique tiered system that includes a mandatory vetting process to provide the best possible chance of success of projects and protect investors.

### Current State of the DeFi Market

The DeFi market has seen explosive growth in recent years, with the total value locked (TVL) in DeFi protocols surging from less than \$1 billion at the start of 2020 to about \$155 billion by mid-2021 (source: DeFi Pulse). This growth can be attributed to the increasing interest and adoption of DeFi by retail and institutional investors. DeFi has unlocked new opportunities for investors to earn yield, access financial services, and participate in governance of various decentralized protocols. However, the rapid growth has also resulted in several challenges, such as high gas fees, congestion on the blockchain, and increasing instances of hacks and security breaches.

### Potential for Future Growth

Despite the challenges, the DeFi market is expected to continue growing in the coming years. According to a report by ConsenSys, the total value locked in DeFi could reach Trillions in USD terms. The emergence of Layer 2 scaling solutions, interoperability protocols, and new DeFi products and services are expected to drive further adoption and growth.

## Strengths and Weaknesses of Existing DeFi Launchpads

Existing DeFi launchpads have played a crucial role in the growth of the DeFi ecosystem. However, they also face several challenges. One of the main challenges is the lack of transparency and thorough vetting of projects, which can lead to scams and security breaches. Another challenge is the unpredictable launch prices and instability of token charts, which can result in investor losses. Additionally, high gas fees and blockchain congestion can make it difficult for investors to participate in launches.

## Addressing Some of the Challenges

To address some of these challenges, AscensionOne is introducing a unique tiered system with a #SafeClick vetting process, ensuring thorough project vetting by the team before the launch, and a fair launch mechanism for even higher risk, un-vetted investments. Additionally, AscensionOne offers a full range of services, including full-stack development, design and branding, hosting, smart contract development, audit and KYC, and marketing consulting.

## FEATURES AND BENEFITS

### Key Features

1. **#SafeClick vetting process:** Projects that pass the LayerOne #SafeClick audit and KYC requirements will be launched on AscensionOne's tiered system for free. This process will be mandatory for founders who want to launch through the platform.
2. **Tiered system:** Participants will purchase AscensionOne's native token to guarantee their spot in seed rounds, private and pre-sales. This approach creates a fair investment level for all market participants and eliminates unpredictable launch prices and results commonly found in "fair launches."
3. **Fair launches:** AscensionOne will cater to the "degen" market by offering a fully automated fair launch mechanism. Unlike the tiered side of the launchpad, these launches will not receive #SafeClick audit or KYC badges, and there will be a fee for launching within the range of current launchpad pricing.
4. **Full range of services:** AscensionOne offers a full range of services, including full stack development, design and branding, hosting, smart contract development, audit and KYC, marketing consulting, and CMC, CG, and Coinology listings.

### Key Benefits

AscensionOne's features benefit users by providing a safer and more transparent launchpad, ensuring the success of projects and protecting investors. The mandatory vetting process and tiered system create a fair investment level for all market participants and eliminate unpredictable launch prices and results commonly found in "fair launches." The fair launch mechanism caters to the "degen" market while also offering a fully automated system for anyone to do their own launch. AscensionOne's full range of services provides a comprehensive suite of support for projects and their founders.

## TOKENOMICS

### Salient Points

- ASPv2 token staking grants access to project launches at a Tier that you chose according to your comfort level
- Investors can register at different Tiers in different launches
- Full calendar month staking ensures collection of tax dividends
- BUY and SELL tax is adjustable and initially will be 10% BUY, 10% SELL
- 50% of the tax is distributed as dividends monthly to those who stake, and 50% goes for development, operations, liquidity, and marketing
- No team tokens and no vesting period for ASPv2 tokens at re-launch
- A portion of liquidity will be locked and managed on an ongoing basis
- Launches will bring new investors who need to buy ASPv2 tokens, which may positively impact the ASPv2 token value

### Details

The ASPv2 token has unique tokenomics that incentivizes token holders to stake their tokens for access to project launches and to collect tax dividends. To access project launches, token holders must register (stake) their ASPv2 tokens. For collecting tax dividends, the minimum staking period is a full calendar month. This staking mechanism ensures that token holders have access to new project launches, and it also creates demand for the ASPv2 token, which can positively impact its value.

In addition to staking for access to project launches, ASPv2 token holders can also collect tax dividends by staking their tokens for at least a full calendar month in the main pool (contract). The BUY and SELL Tax is adjustable depending on market conditions, but will initially be 10% buy, 10% sell. 50% of the tax collected is distributed as dividends to those staking their tokens, and the remaining 50% is distributed for development, operations, liquidity, and marketing. This allocation ensures that token holders are rewarded for their contribution to the ecosystem, and it also ensures that there are sufficient

funds for development, operations, liquidity, and marketing.

Note that there are two types of dividends that can be earned. One is straightforward. For passive income, stake ASPv2 in the main pool (contract) and that's it. This does not grant you access to launches. You can purchase additional ASPv2 tokens for that.

Registering (staking) to access your opportunity to buy into launches also earns you some dividends and additional potential bonuses. There are some rules around the vesting periods for the tokens purchased during a launch and if the “forfeiture rule” kicks in, you benefit from a distribution of 80% of the launch tokens that someone just forfeited. You will also receive 50% of the normal tax dividend distribution while your tokens are staked in a project launch for a full calendar month at a time.

Your triple benefit from this includes, the newly launched token possibly increasing in value because you were early, 50% of the normal tax dividend distribution, and the potential to earn additional launch tokens if someone forfeits some or all of their investment. Win win win.

The ASPv2 token has no team tokens, and there is no vesting period on the previously purchased ASPv2 token. This means that previous token holders can sell their tokens at any time, but it is recommended that they do so responsibly. At least a portion, if not all of the liquidity will be locked and managed on an ongoing basis, which ensures that there is always sufficient liquidity for token holders to buy and sell their tokens.

Demand = increase in value. The ASPv2 token's value can also benefit from new investor demand. Each project launch will bring a continuous flow of new investors who will need to buy ASPv2 tokens to participate in a launch. This can positively impact the value of the ASPv2 token and create a self-reinforcing cycle of value creation. Overall, the ASPv2 tokenomics creates incentives for token holders to stake their tokens, rewards them for their contribution to the ecosystem, and ensures that there are sufficient funds for development, operations, liquidity, and marketing.

## F.A.Q.

### *F.A.Q: What are Tiers?*

ANSWER: Tiers are levels that give you the ability to invest more or less into a launch. Lower your Tier number the MORE you can invest, so Tier 1 is the highest Tier. They also guarantee an allocation of tokens, meaning, you are guaranteed to be able to buy as many as you want within your Tier.

### *F.A.Q: Why Tiers?*

ANSWER: Tiers give everyone a fair chance to invest in a token or NFT launch and guarantees them a spot. No “LIKE AND RT” games or shilling required, just register and you’re in and allowed to buy into the launch at your Tier, at an investment level that suits your risk tolerance.

### *F.A.Q: Are Tiers based on the number of ASPv2 tokens I own?*

ANSWER: No. Tiers are based on the dollar (\$) amount of ASPv2 tokens that you register (stake) in a project launch. You can register for multiple launches and stake different amounts (different Tiers) in each one depending on how much you want to invest.

The dollar (\$) amounts are not FIAT, rather USDT/BUSD or other dollar based stable coin.

### *F.A.Q: What does it mean to “register” for a launch?*

ANSWER: It means you are “staking” ASPv2 tokens. You register (stake) a dollar (\$) value of tokens equal to or greater than the Tier you want to invest at. This means the number of ASPv2 tokens will vary due to the value of the token prior to each launch.

### *F.A.Q: How do I earn by owning ASPv2 tokens?*

ANSWER: Staking and registering for launches. Those are two different things.

The best way to earn is by using your ASPv2 tokens to register for launches and invest in a launch, benefiting from being early into a project. While your tokens are staked for a lunch (including the vesting periods) you

will earn 50% of the normal tax dividend distribution each month plus, potentially win additional tokens from the launch you invested in when the “forfeiture rule” kicks in.

Another way to earn passively is to stake your ASPv2 tokens in our main staking pool (contract) and earn the normal tax dividends each month. Tax dividends are shared among all ASPv2 token holders BUT only if they remain staked for a full calendar month. While this method earns you passive income, you cannot participate in launches with the tokens you stake in the main pool. You can, however, leave your tokens staked in the main pool and also buy more ASPv2 tokens to register (stake) in any number of launches.

*F.A.Q: What happens if the value of ASPv2 changes prior to the sale and now I qualify for a higher or lower tier?*

ANSWER: Your registered Tier is fixed at the time you register (at the time you connect your wallet and stake your ASPv2 tokens for your chosen launch). As a result, a change in the value of ASPv2 will not change your registered Tier.

*F.A.Q: After I register for a launch can I change my Tier?*

ANSWER: Both Yes and No.

NO: If you want a guaranteed allocation, that is, if you want to guarantee your place in the launch sale, then NO, do not attempt to de-register (un-stake) and re-register (re-stake) for the sale because someone else might fill your spot.

YES: If you’re willing to risk losing your spot in the sale. There are no contract restrictions preventing you from re-registering.

WARNING: you can only do this during the registration period. Once the registration closes and/or the sale begins you cannot change your Tier.

*F.A.Q: Once a sale begins can I change my Tier?*

ANSWER: No. Registration is closed and the sale has started. However, if the sale is unsuccessful there may be an additional round in which you can register.

*F.A.Q: During registration, what happens if the registration doesn't fill?*

For example, What happens if the estimated amount of tokens to be bought by investors does not reach the minimum set by the project owners?

ANSWER: It is up to the owners to continue or cancel the launch. Cancelling results in all registrations being cancelled and all staked ASPv2 tokens returned.

*F.A.Q: What happens if the sale happens and the softcap is not reached?*

ANSWER: It is up to the owners to continue or cancel. Cancellation results in all investments being returned and registrations being cancelled, and all staked ASPv2 tokens are returned to your wallets.

*F.A.Q: What if I missed the registration period but want to get in on a launch?*

ANSWER: You cannot register once the registration period is closed.

HOWEVER, if a registration target, or a softcap is not reached during a sale, the owners may open the registration or sale again for a short time in order to meet their target and that would be your opportunity to get in.

*F.A.Q: Can the project owner/founder RUG (commit fraud) and steal all my staked ASPv2 tokens?*

ANSWER: No. AscensionOne controls those contracts not the project owner/founder. They cannot rug your staked ASPv2 tokens.

*F.A.Q: Can the project owner/founder RUG (commit fraud) after I buy their launch tokens?*

ANSWER: Yes, but read on, at some stages they CANNOT RUG.

We're just being blunt and we do everything we can to reduce your risk. There are certain stages after you buy into a launch at which THEY CANNOT RUG.

Here are some things to consider:

a. RISK IS MINIMAL – most likely never rug IF:

The project contracts are audited by LayerOne Cloud (Pty) Ltd, and more importantly, the owners/founders and anyone controlling the liquidity pool (LP) and contracts have a LayerOne KYC. This would be a BLUE PILL LAUNCH.

b. THE RISK IS HIGHER – but may not rug IF:

The project has audits and KYC's from sources other than LayerOne Cloud (Pty) Ltd. We do not endorse audits and KYC's done by others, however, do your own research (DYOR) and you may feel the audit/KYC the owners/founders present are reputable and you may feel comfortable with the launch.

c. THE RISK IS VERY HIGH – potential rug IF:

There is no audit or KYC. This would be a RED PILL LAUNCH. They can rug at any stage. Some like to play this game. You might too if you have enough risk capital.

d. THEY CANNOT RUG A BLUE PILL LAUNCH:

- As soon as the sale closes. We control that part of the process.
- When the liquidity pool and token contract go live. We control that part of the process up to the point that we turn over ownership.

e. THEY CAN RUG ANY LAUNCH:

- When we turn over any funds that are not going into locked liquidity such as funds allocated to development, operations, marketing and other. They can take those funds and do as they please – their KYC status can help reduce this risk, see points a. & b. above.
- When we turn over the ownership of the liquidity and contracts. Their contract audit & KYC status can help reduce this risk, see points a. & b. above.

## ROADMAP

### Q2 2023:

- Private sale of ASPv2
- ASPv2 token goes live on BSC
- First project launch - private sale and launch

### Q3 2023:

- Launch of the treasure hunt page
- Target of 1 launch per month
- Integrate a FIAT onramp to buy crypto with a credit card
- DEX launch (tbd)

### Q4 2023:

- Depending on the market, development of the Crypto Bronto NFT platform (brand to be determined)
- Continuation of building, marketing, and growth, growth, growth!

## THE TEAM

Our team consists of professionals with diverse backgrounds and strengths, which we believe is essential in the launchpad industry. They aim to help scale projects by providing consultation and a safer place to raise seed, private, and presale funding.

Developers are a crucial area of strength for us. We have a dedicated team of blockchain, smart contract, and decentralized application experts who bring our concepts to life and ensure that systems function correctly. Their expertise is essential to the success of our platform.

Marketing is another essential aspect of our team. Our professionals specialize in strategic partnerships and creative brand development, which are crucial to the growth and success of our platform. We believe that a strong marketing approach is essential for engaging with our community and building lasting partnerships.

Project leadership is vital. AscensionOne is led by Kelvin Jones, who has over 25 years of experience in technology and has earned more than 30 internationally recognized certifications, including IT Management from the

University of Cape Town, South Africa.

While Canadian, he resides in South Africa and assists in managing the day-to-day operations of his wife's cloud and cybersecurity business as a senior consultant at LayerOne Cloud (Pty) Ltd.

Kelvin spent about 7 years in the public sector with United Nations organizations and has successfully managed startup projects over the years. He is a Certified Cryptocurrency Auditor and has also undergone a thorough KYC by LayerOne. He has been vetted for police clearance from Canada, Switzerland, the Russian Federation, and South Africa. His experience and expertise are essential in ensuring the success of our platform.

## CONCLUSION

AscensionOne is a decentralized launchpad that offers a unique tiered system and #SafeClick vetting process to create a safer place for crypto and help you build generational wealth.

This whitepaper emphasizes that this project and others like it are high risk, but investors who know how to make informed decisions and take responsibility for their actions will appreciate the thorough vetting process that AscensionOne offers. The LayerOne #SafeClick audit and KYC requirements are mandatory for founders to launch through the tiered platform, which is free and marked as a BLUE PILL launch for market participants who want to lower their risk. The team will provide consultation throughout the process. AscensionOne also offers full stack development, design and branding, hosting, smart contract development, audit and KYC, marketing consulting, and listings.

The DeFi market has experienced explosive growth, but it has also seen issues such as high gas fees, lack of transparency, and scams. AscensionOne aims to address some of these challenges by providing a safer, more transparent launchpad.

Investors who are willing to take on the risk of DeFi and appreciate a thorough vetting process will find AscensionOne's launchpad and tiered system appealing.

With the potential for future growth in the DeFi market, investing in crypto through AscensionOne's launch services could be a lucrative opportunity for those who are willing to do their research and make informed decisions. However, investors should never bet the farm, sell their house or car, or play with more than they can afford to lose.

The bottom line, as with any project in the DeFi space is this: Proceed with caution, do your due diligence, and only invest what you can afford to lose.

Please join us as we try to build a safer place for DeFi and  
build generational wealth!

#ClickSafe out there
